

TechTrove 2.0: Official Judging Rubric

This document outlines the official criteria and weights for evaluating all projects at the TechTrove 2.0 hackathon. Each project will be scored out of a total of 100 points, broken down into three main pillars.

Pillar 1: Concept & Innovation (Weight: 40%)

This pillar evaluates the quality, creativity, and relevance of the idea itself.

- **Problem-Solution Fit (1-10 points):** How well does the solution address the actual problem statement it chose to tackle?
- **Creativity & Originality (1-10 points):** How innovative or novel is the approach? Does it offer a fresh perspective on the problem?
- **Impact & Usefulness (1-10 points):** How meaningful is the potential impact of this solution? Does it provide significant value to its target users?

Pillar 2: Technical Execution & Progress (Weight: 30%)

This pillar evaluates what the team actually built during the 24-hour hackathon.

- **Functionality (1-10 points):** How much of the core idea was successfully implemented? Does the prototype work as demonstrated?
- **Technical Complexity (1-10 points):** How technically challenging was the project? Did the team use their skills effectively to build a robust solution?
- **User Experience (UX) & Design (1-10 points):** Is the application intuitive, easy to use, and well-designed?

Pillar 3: Feasibility & Future Potential (Weight: 30%)

This pillar evaluates the project's real-world viability and the team's presentation.

- **Viability & Scalability (1-10 points):** Could this project realistically be developed further and deployed? Does it have the potential to grow?
- **Presentation & Pitch (1-10 points):** How clearly and persuasively did the team present their project? Did they effectively communicate their vision and its value?
